"IMPACT OF ICT ON QUALITY IMPROVEMENT: A NEW DIMENSION IN HIGHER EDUCATION"

Education is the basic foundation of a country where teaching and training are seen as a key for change of individual for national advancement. A country is said to be esteemed when a noticeable number of the natives have quality training and education. Quality instruction incorporates: Learners who well-sustain and prepare to learn and grow in learning by their families and networks. A content that is reflected in important educational plans and materials for the obtaining of fundamental abilities, particularly in the zones of proficiency, numeracy and abilities forever, and information is achieved through instructors who use focused educating approaches. Furthermore, skilful evaluation to encourage learning and diminish variations, and results that envelop learning, aptitudes and frames of mind, and are connected to national objectives. In numerous nations, interest for college far surpasses supply and Governments and organizations are turning increasingly more to the utilization of ICTs to connect the entrance hole. It is too soon to state whether the job of ICTs in the instructing capacity of college is really transformative, or regardless of whether it is just are packaging of past instructional method. ICTs are a conceivably useful asset for broadening instructive chances, both formal and non-formal, bunches generally rejected from training because of social or social reasons, for example, ethnic minorities, young ladies and ladies, people with handicaps, and the older, just as all other people who for reasons of expense or on the other hand as a result of time limitations cannot select on grounds. Adequacy, cost, value, and maintainability are four wide interlaced issues which must be tended to when considering the general effect of the utilization of ICTs in improving quality training [9]. Information and communication technology plays a significant role in economy by attaining socio-economic goals in variety of domains such as healthcare, education & employment, and boosting up various private and public services. Due to this reason, nations are focusing on growth of ICT to increase their economic productivity. Furthermore, role of ICT in education is now considered as having a multiplier impact on economy by reducing the costs (utilizing e- technology) across national education system. Also, use of ICT in education will make it possible to learn anytime from anywhere in real time and access the remote learning resources across the globe, and thereby addressing some major issues. Main objective of ICT is to bring equity and access of education to all by creating and managing an efficient education system. This major transformation is occurring all over the world due to rapid technological advancements each day [2]. ICT may significantly help in improving the quality of education by helping the learners to work in information age. Besides, it may facilitate the independent learning. This paper will mainly discuss the role of ICT in education, content development and management aspect, different categories of ICT in education, benefits and challenges associated. At the same time, futuristic scope of ICT in education is also discussed in this paper.

Prof.(Dr.) Ramachandra Dhir

Retd. Professor in Education
